| Switching system: | Low-level element |
| Switching system: | This low-level switching element was designed for switching low powers in electronic circuits. The mechanism assures reliable switching of loads ranging from a few $\mu A/\mu V$ up to 100 mA/ 42 VAC/DC. Single-break momentary contact, as normally open or normally closed with 4 independent points of contact. 2 momentary contactsper switching element; combination of normally open and normally closed is possible. Special features are the long life, extremely short rebound time and stable contact resistance. |
| Release type: | Twist to unlock |
| Mechanical lifetime: | 1 Mil. cycles of operation |
| Operating force: | 18 21 N (depending on the switching element) |
| Operating Travel: | 3 mm |
| Tightening torque: | Fixing nut max. 0.5 Nm |
| Terminal details 1: | The universal terminals permit these units to be mounted on printed circuit boards (PCB). These terminals can also be used as soldering or plug-in terminals. For these terminals we can also supply a plug-in base which, when soldered on to the board, enables the switch to be plugged in. |
